SITE MAP STRUCTURE

How components and styling will engage the audience?

My aim for the website was to make it as simple as possible so any target audience can access it.

For styling I chose 'Saira Stencil One - Cursive' for the base Font-family on every page unless overridden. Which in my opinion stands out nicely.

For the Navigation component I used a simple Navigation bar at the top and footer at the bottom, this way it is easier to see it on every page without too many animations crowding the layout

Issues I encountered

- **Time Management.**
- **Making it viewable on Tablets & Phones (Live servers fault)**
- **& Again Live Server !!!**
- **SASS compiler**

What I enjoyed

- Fixing an issue after spending a lot of time on it.
  - CSS Flex, Figuring out how to manipulate it.
- When the website was live and it looked pretty.

Thank you for Listening
